TripWise

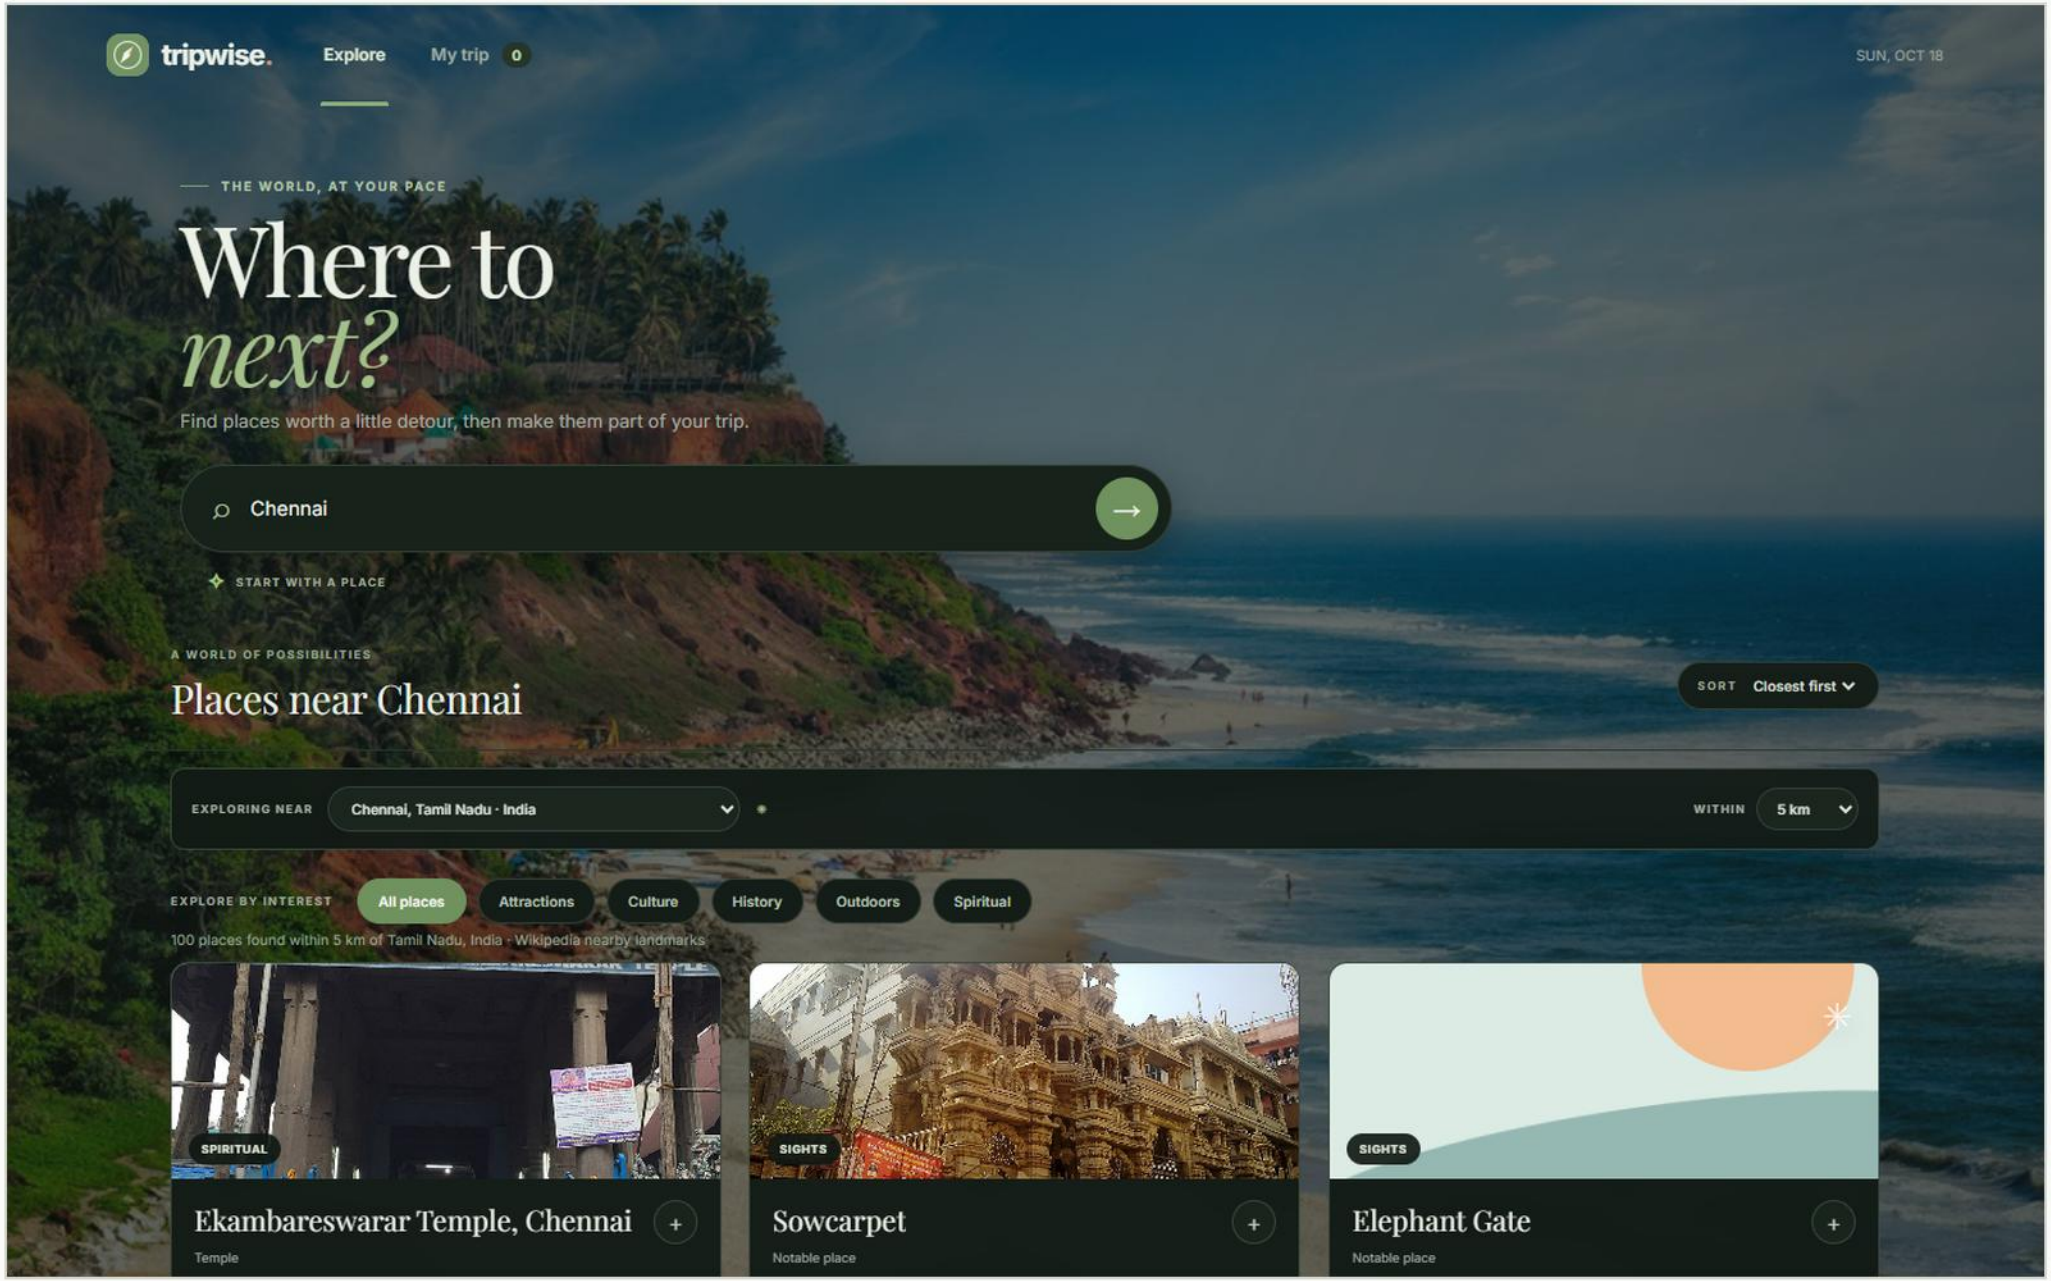

Full-Stack Travel Planner — Project Screenshots

NAME	Sri Saidhakshini Venkatesan
REGISTER NO.	25BCE1685
TRACK	Track 3 — Full-Stack Development
STACK	Python (standard library HTTP server) · SQLite · HTML/CSS/JavaScript
EXTERNAL APIS	Open-Meteo (geocoding, forecast) · OpenStreetMap Overpass · Wikipedia

Contents: Explore · Search & filters · Destination details · My trip (empty & populated) · Empty state · Mobile views

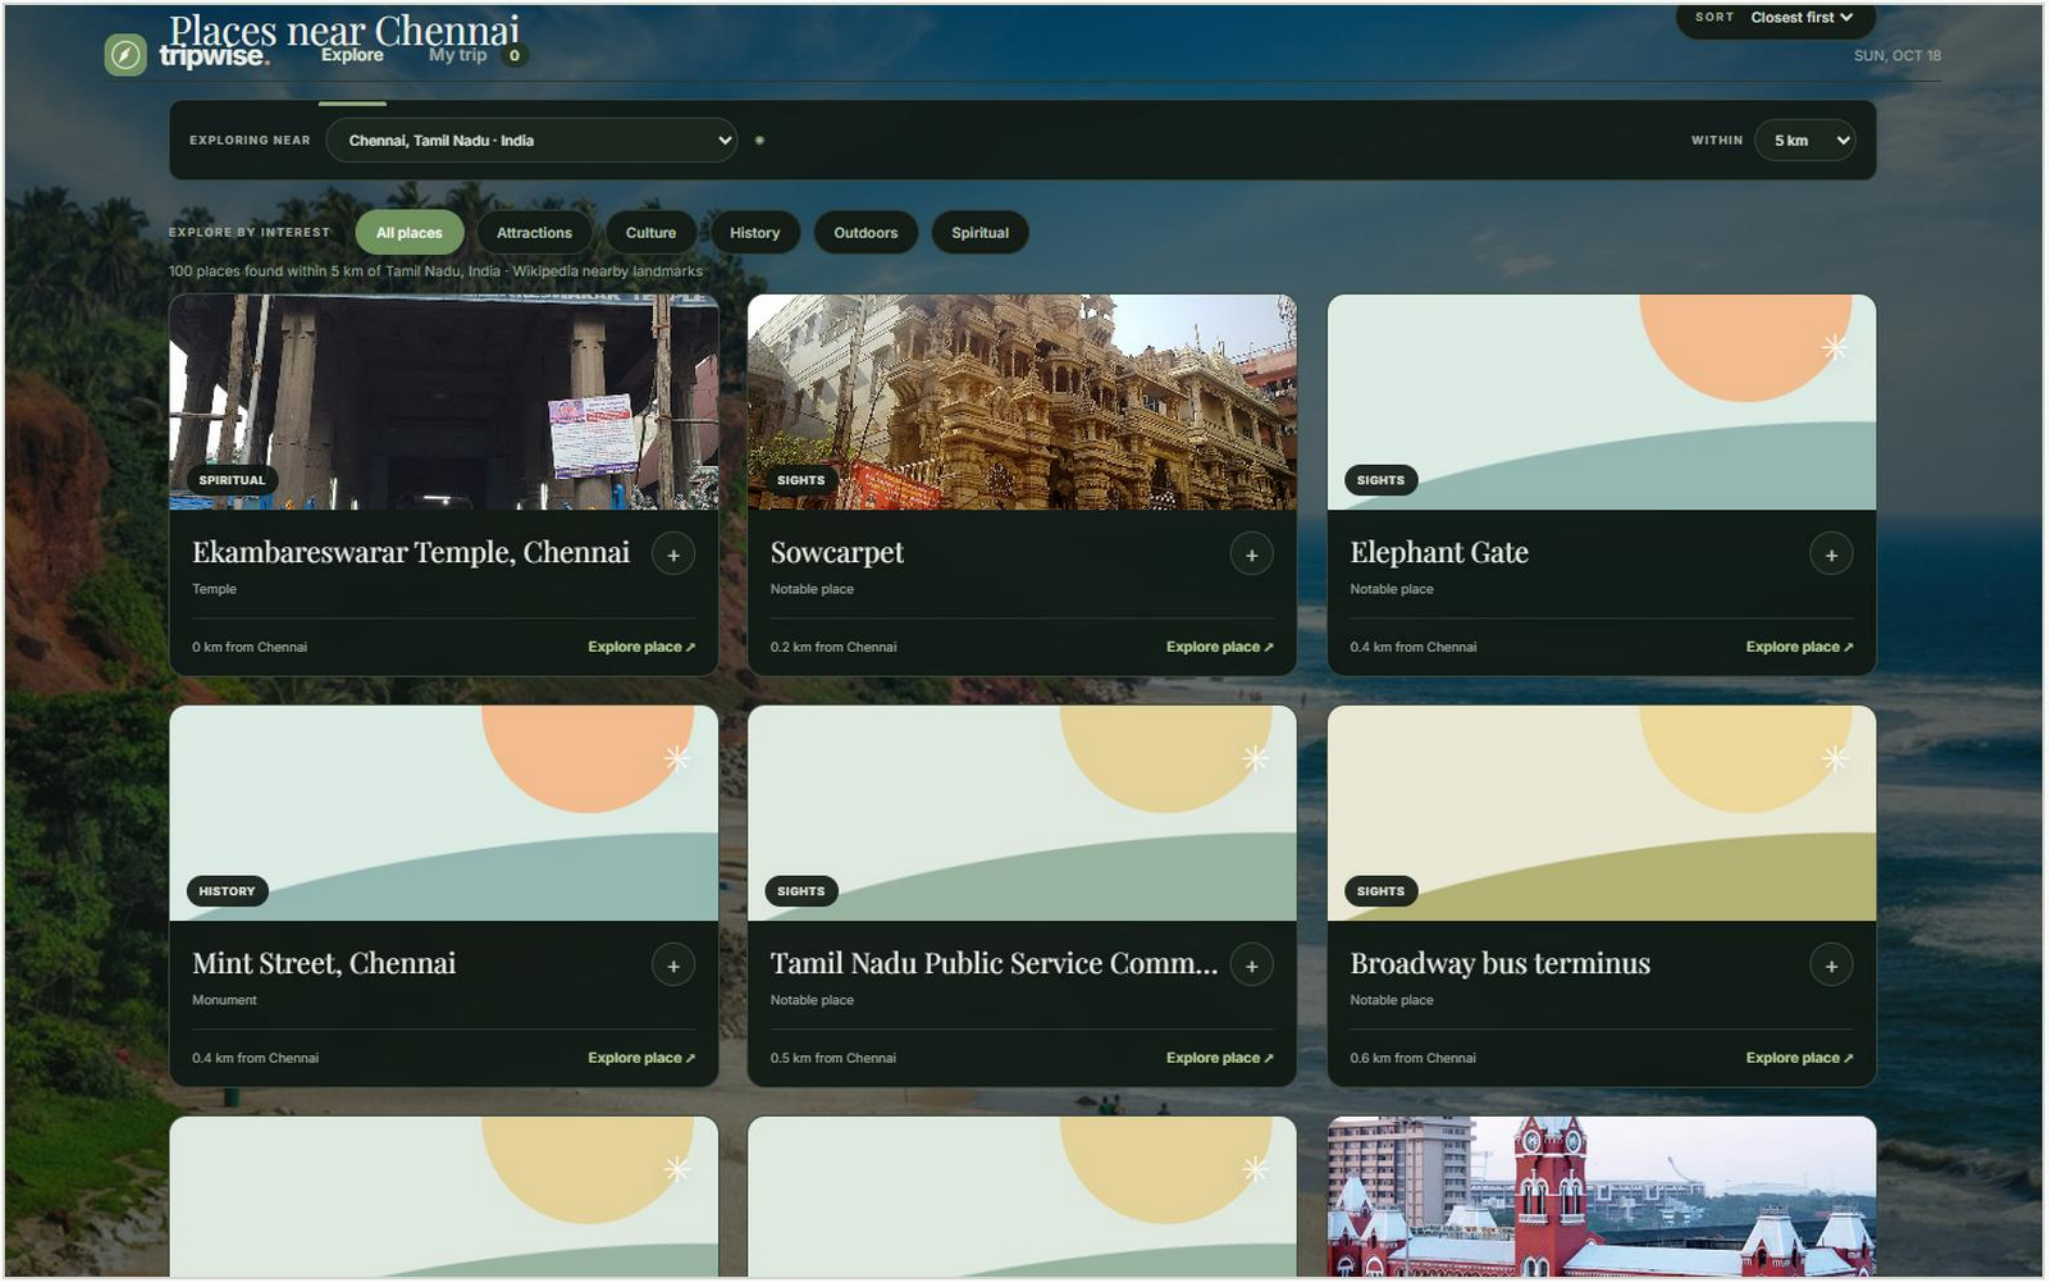

1. Explore — nearby places

Search a city, then discover real places nearby with photos, category and distance.

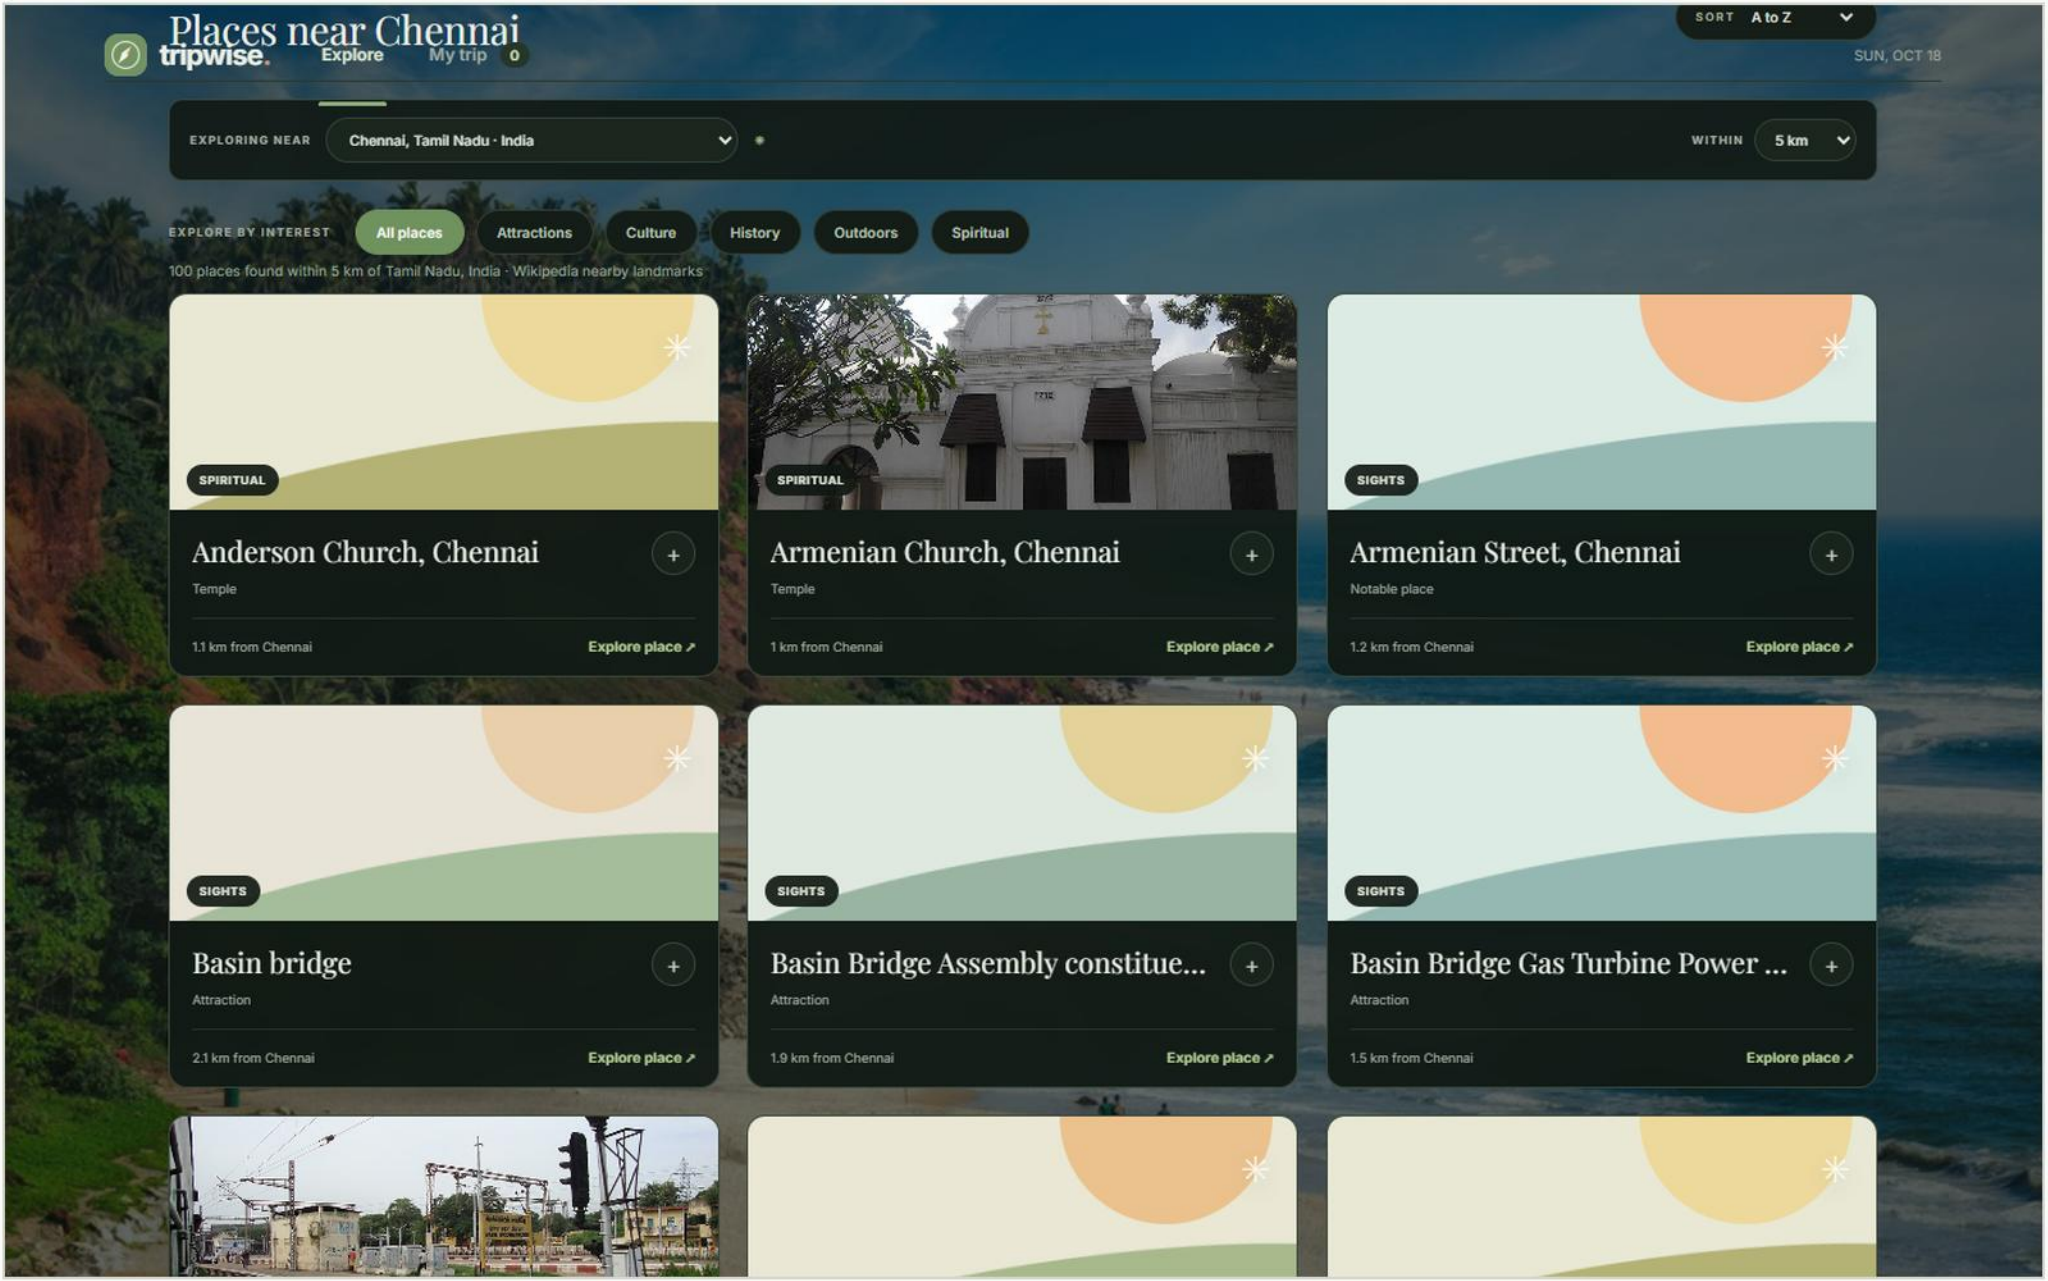

2. Explore — search results

Results for Chennai within 5 km, with photos from Wikipedia and OpenStreetMap place data.

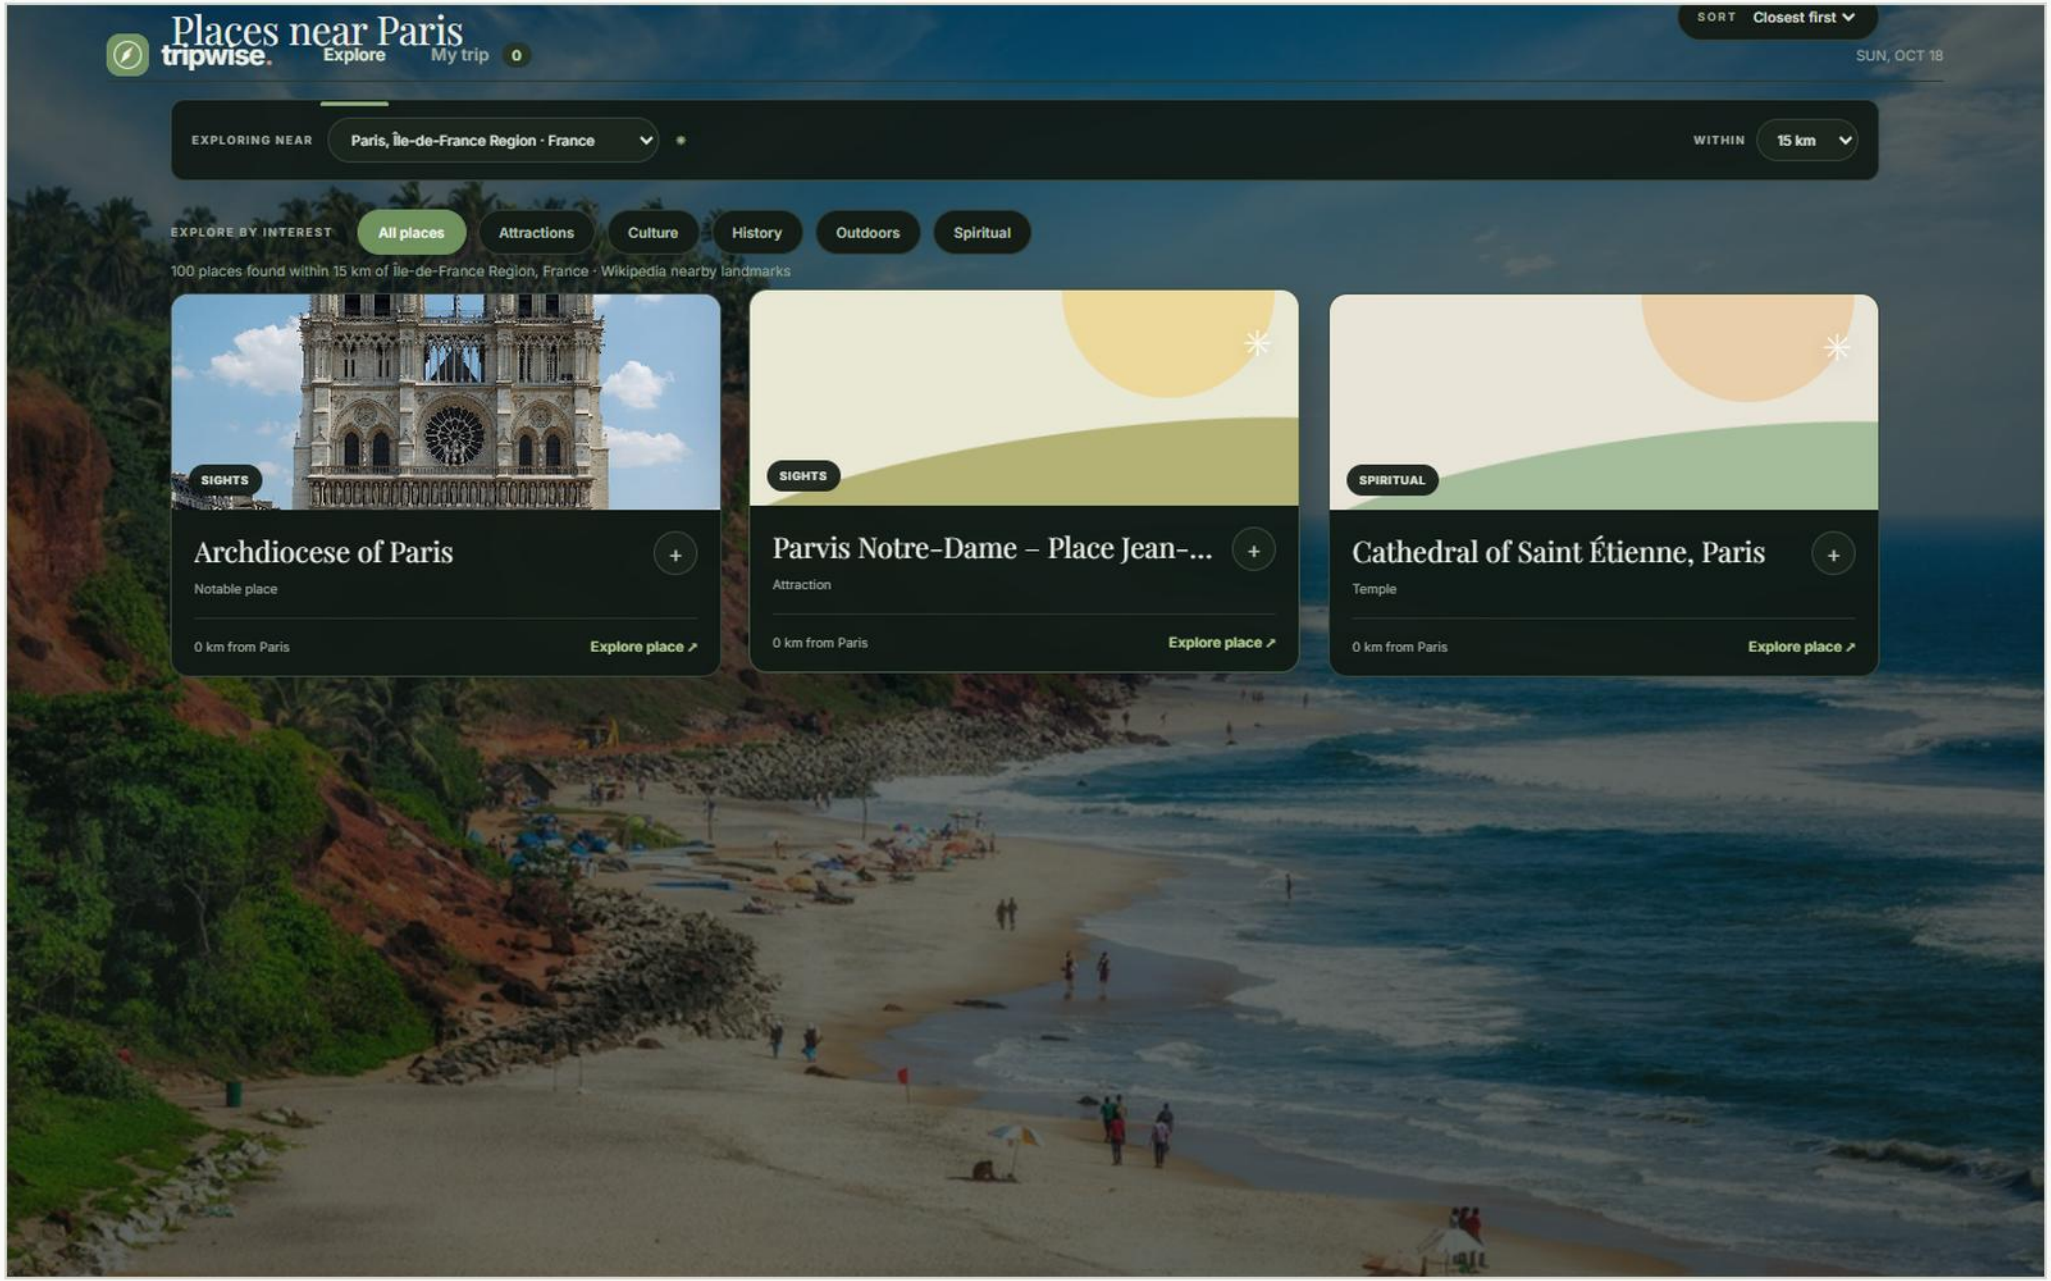

3. Search & filter — sort A to Z

Sort filter applied to the nearby-places results.

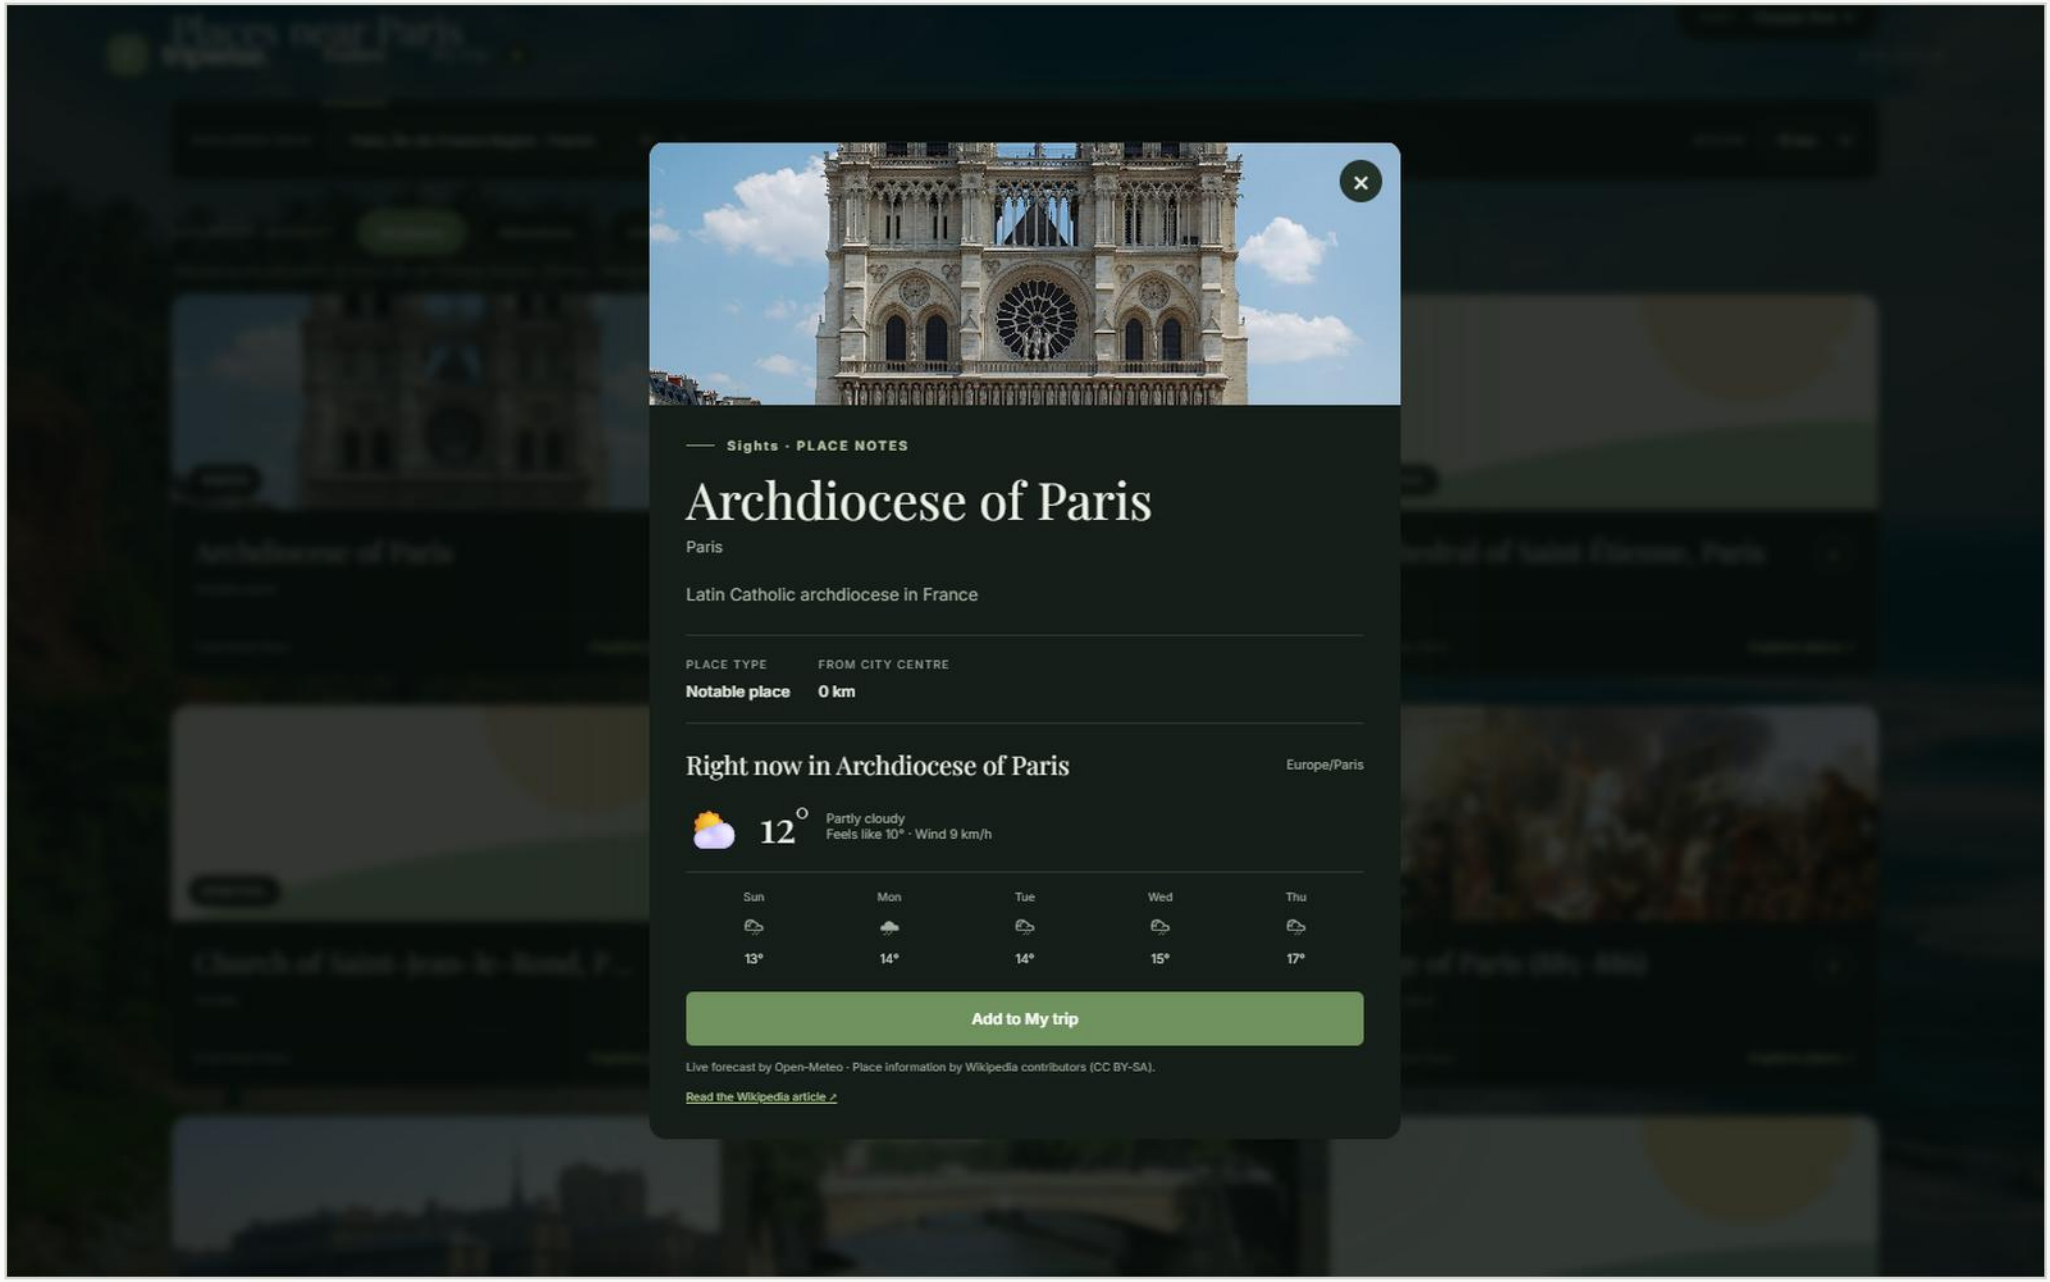

4. Search & filter — new city and wider radius

Searching Paris and widening the radius to 15 km.

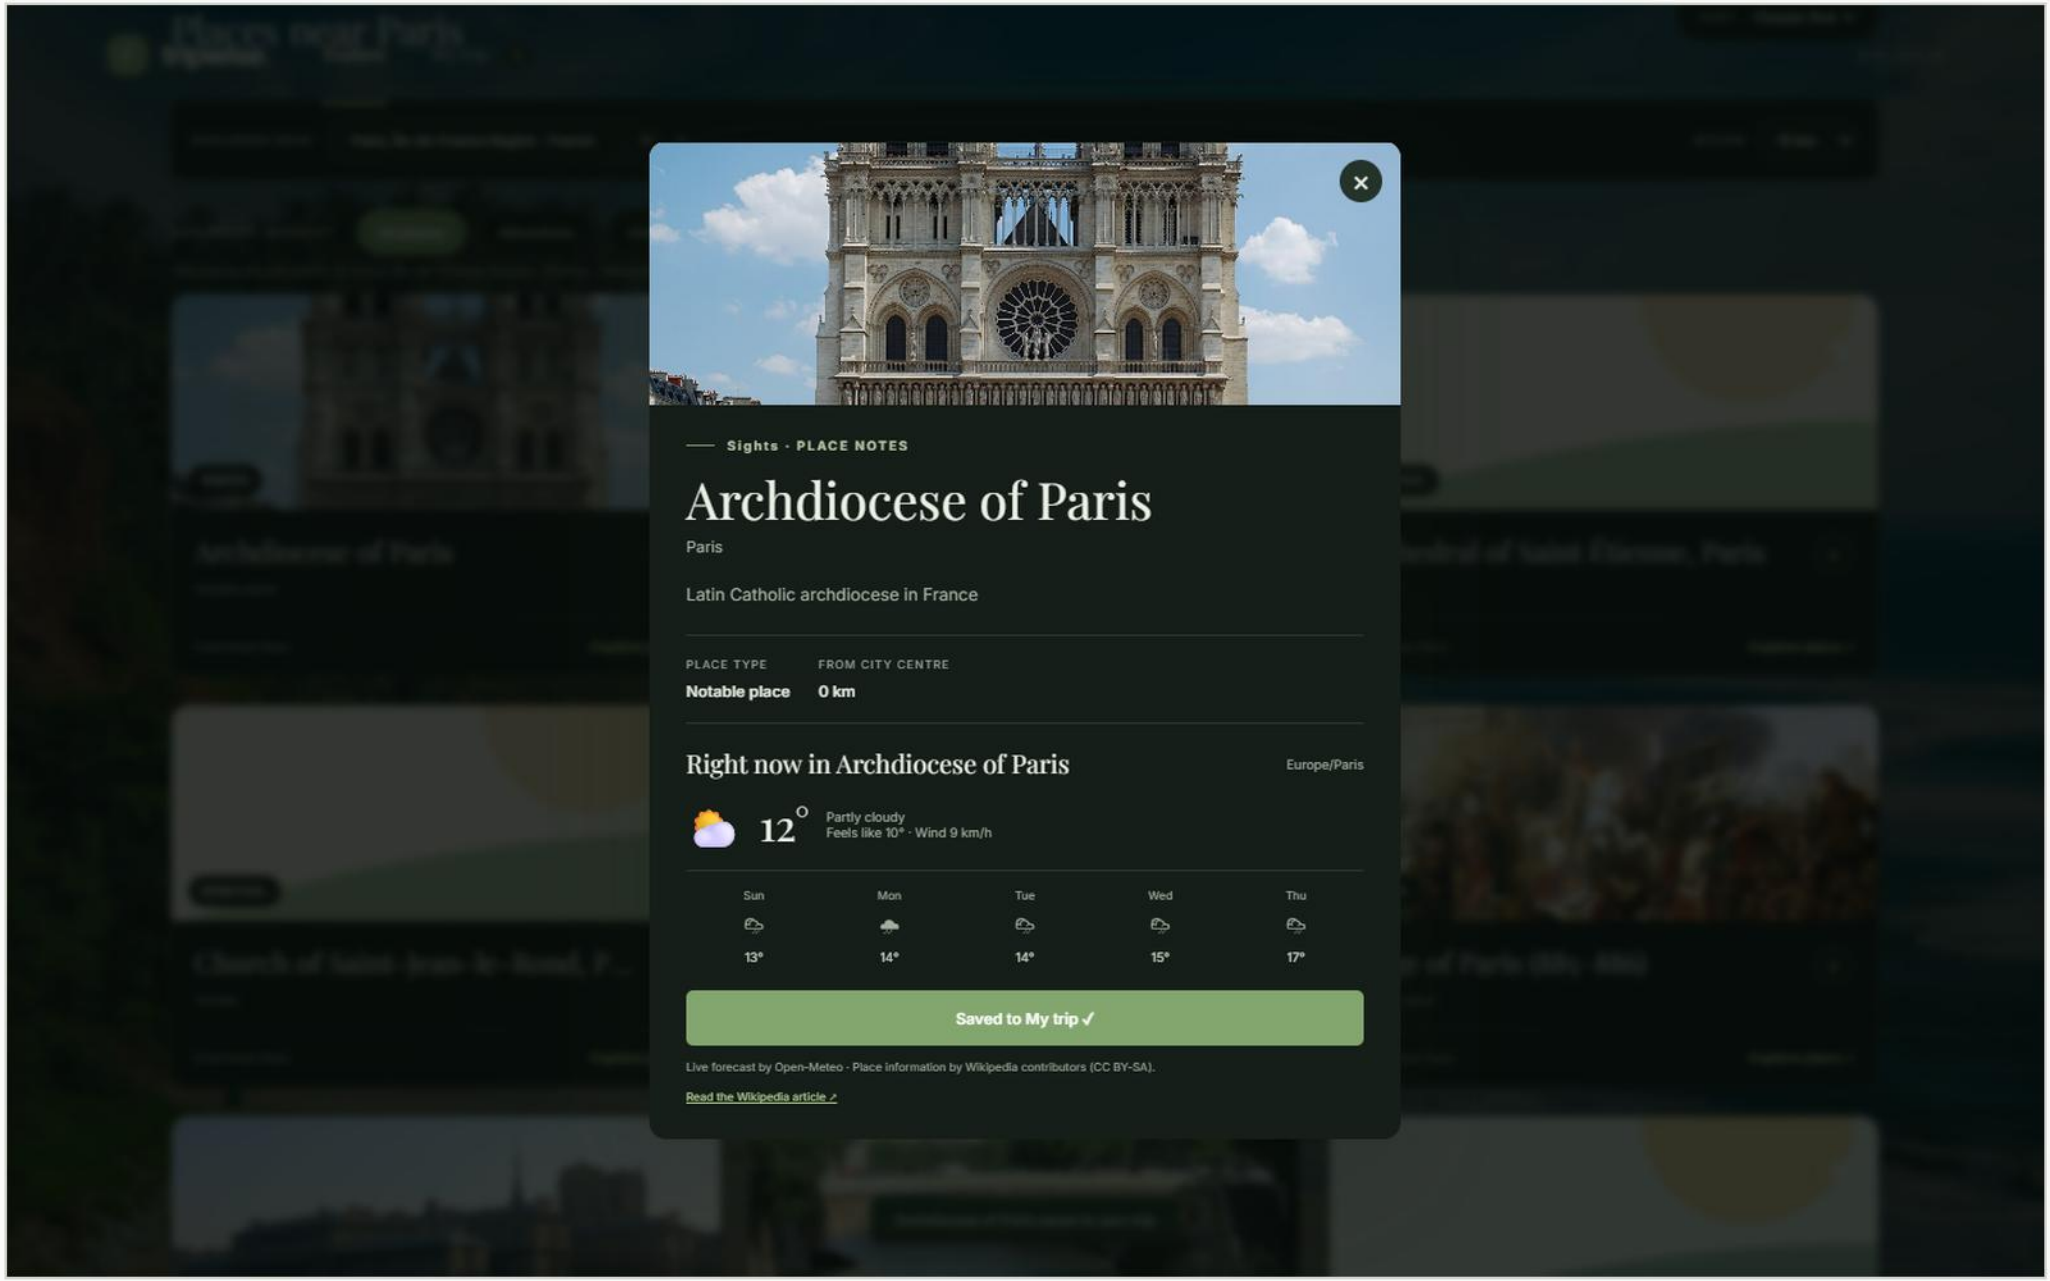

5. Destination details

Photo, description, distance and a live 5-day forecast from Open-Meteo.

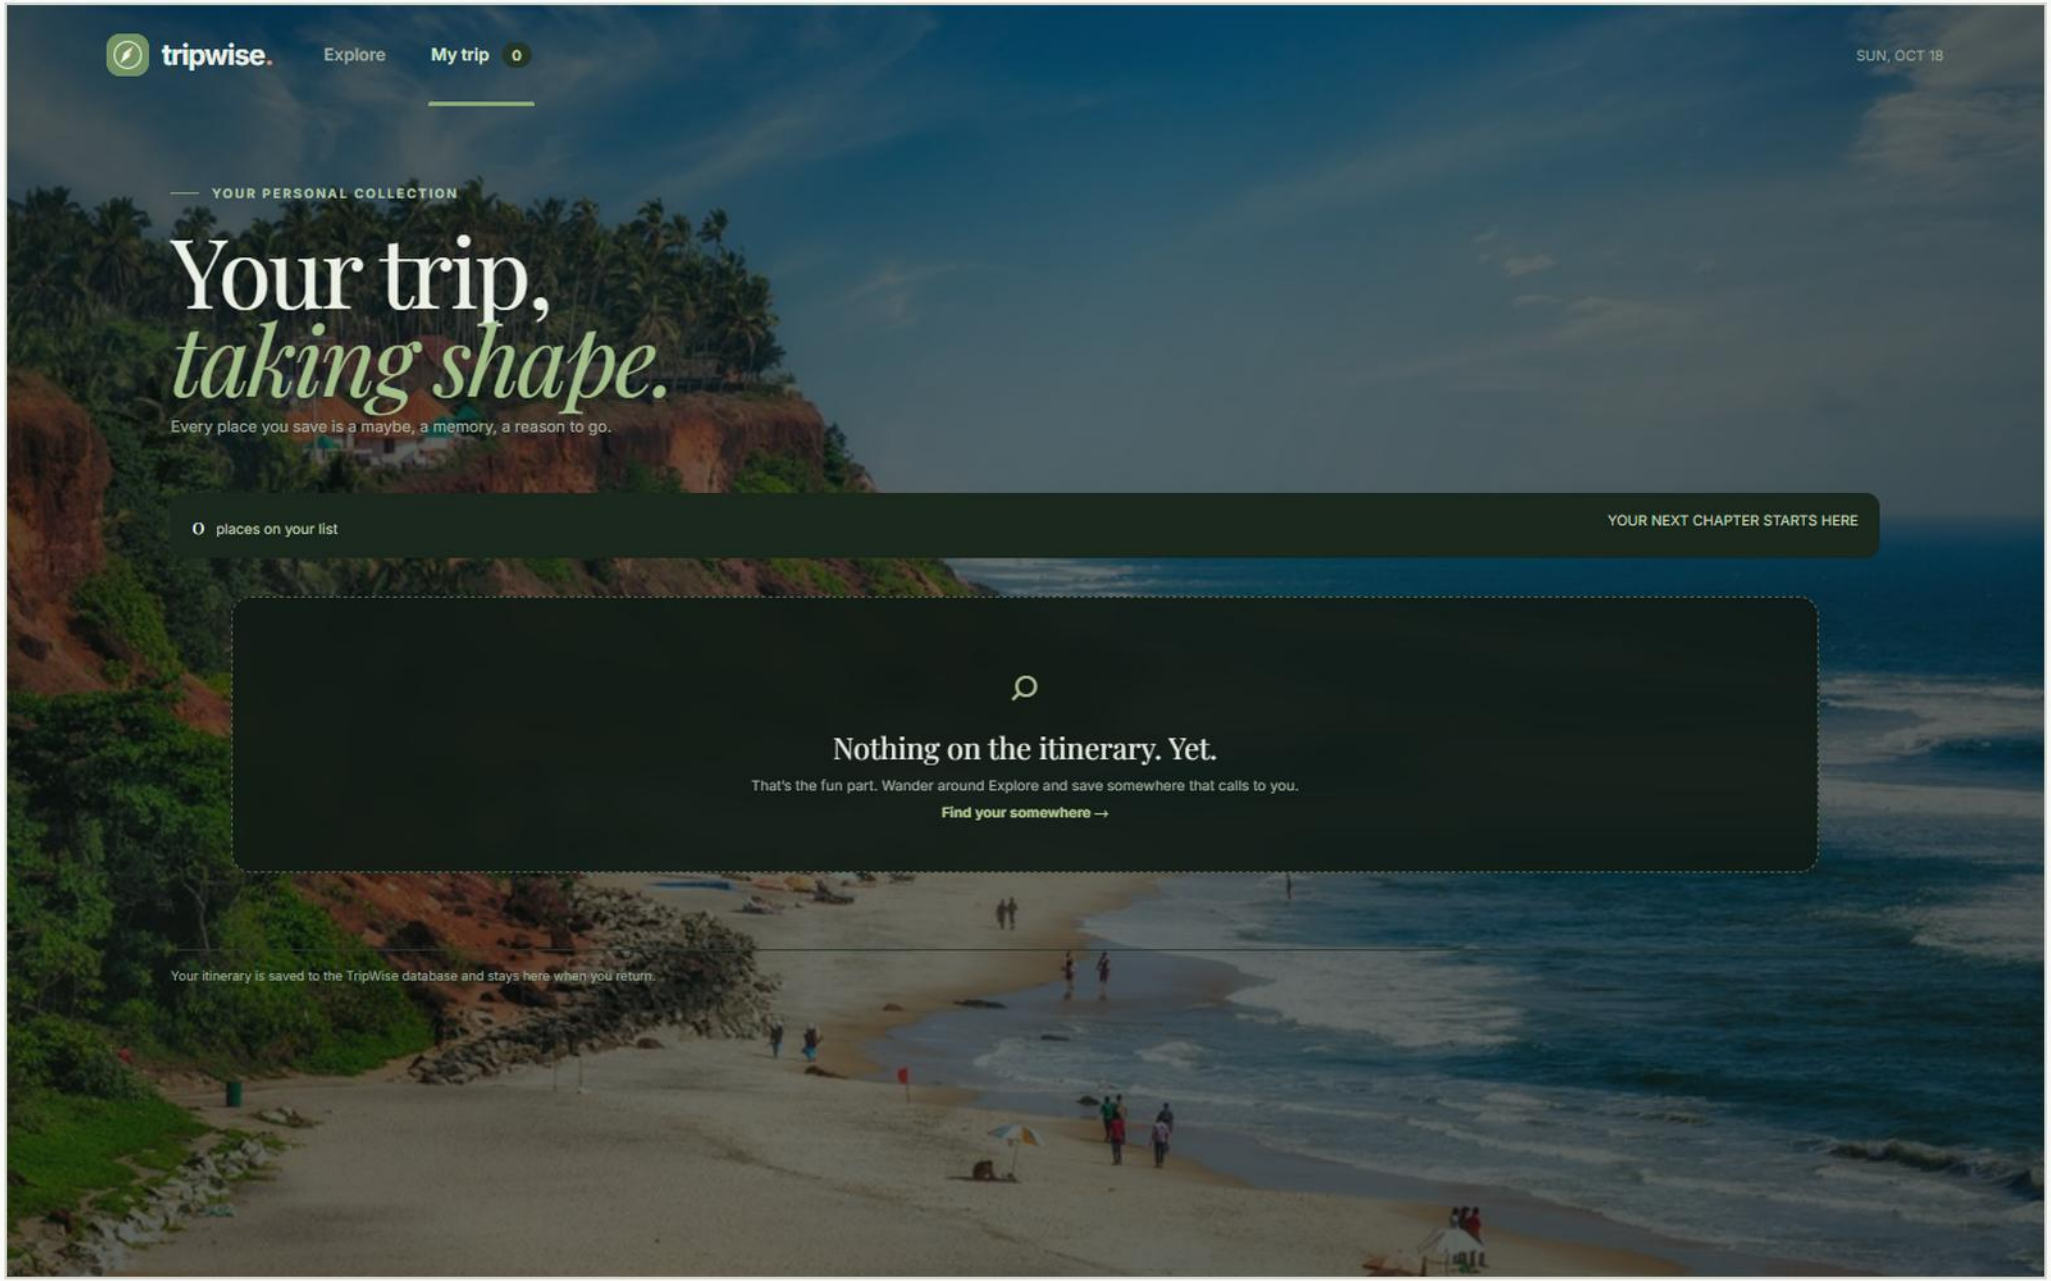

6. Destination details — saved to trip

The Add to My trip button updates after saving (stored in SQLite).

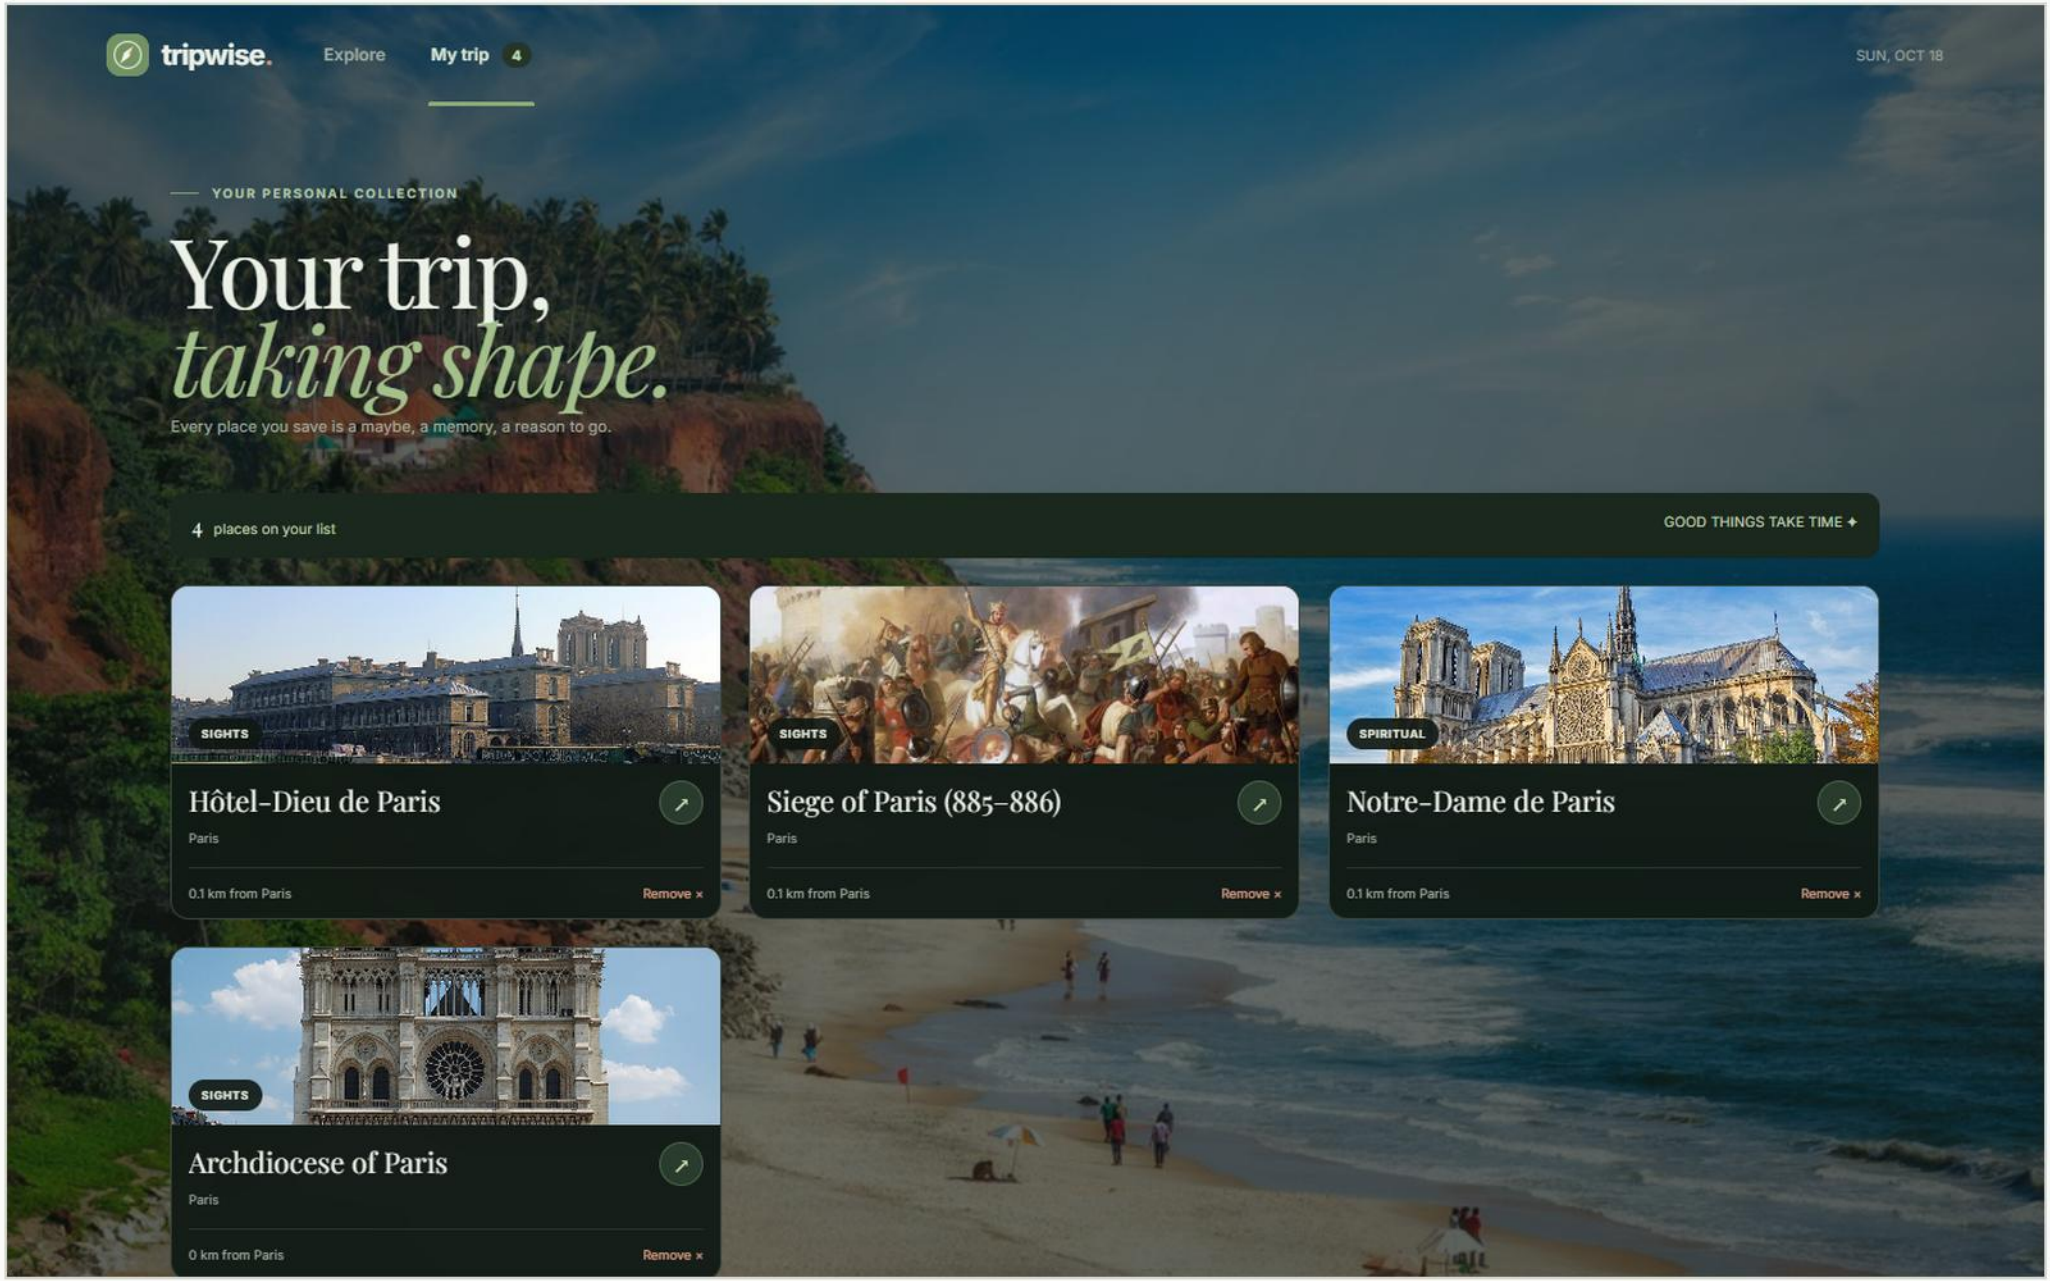

7. My trip — empty state

What a first-time visitor sees before saving anything.

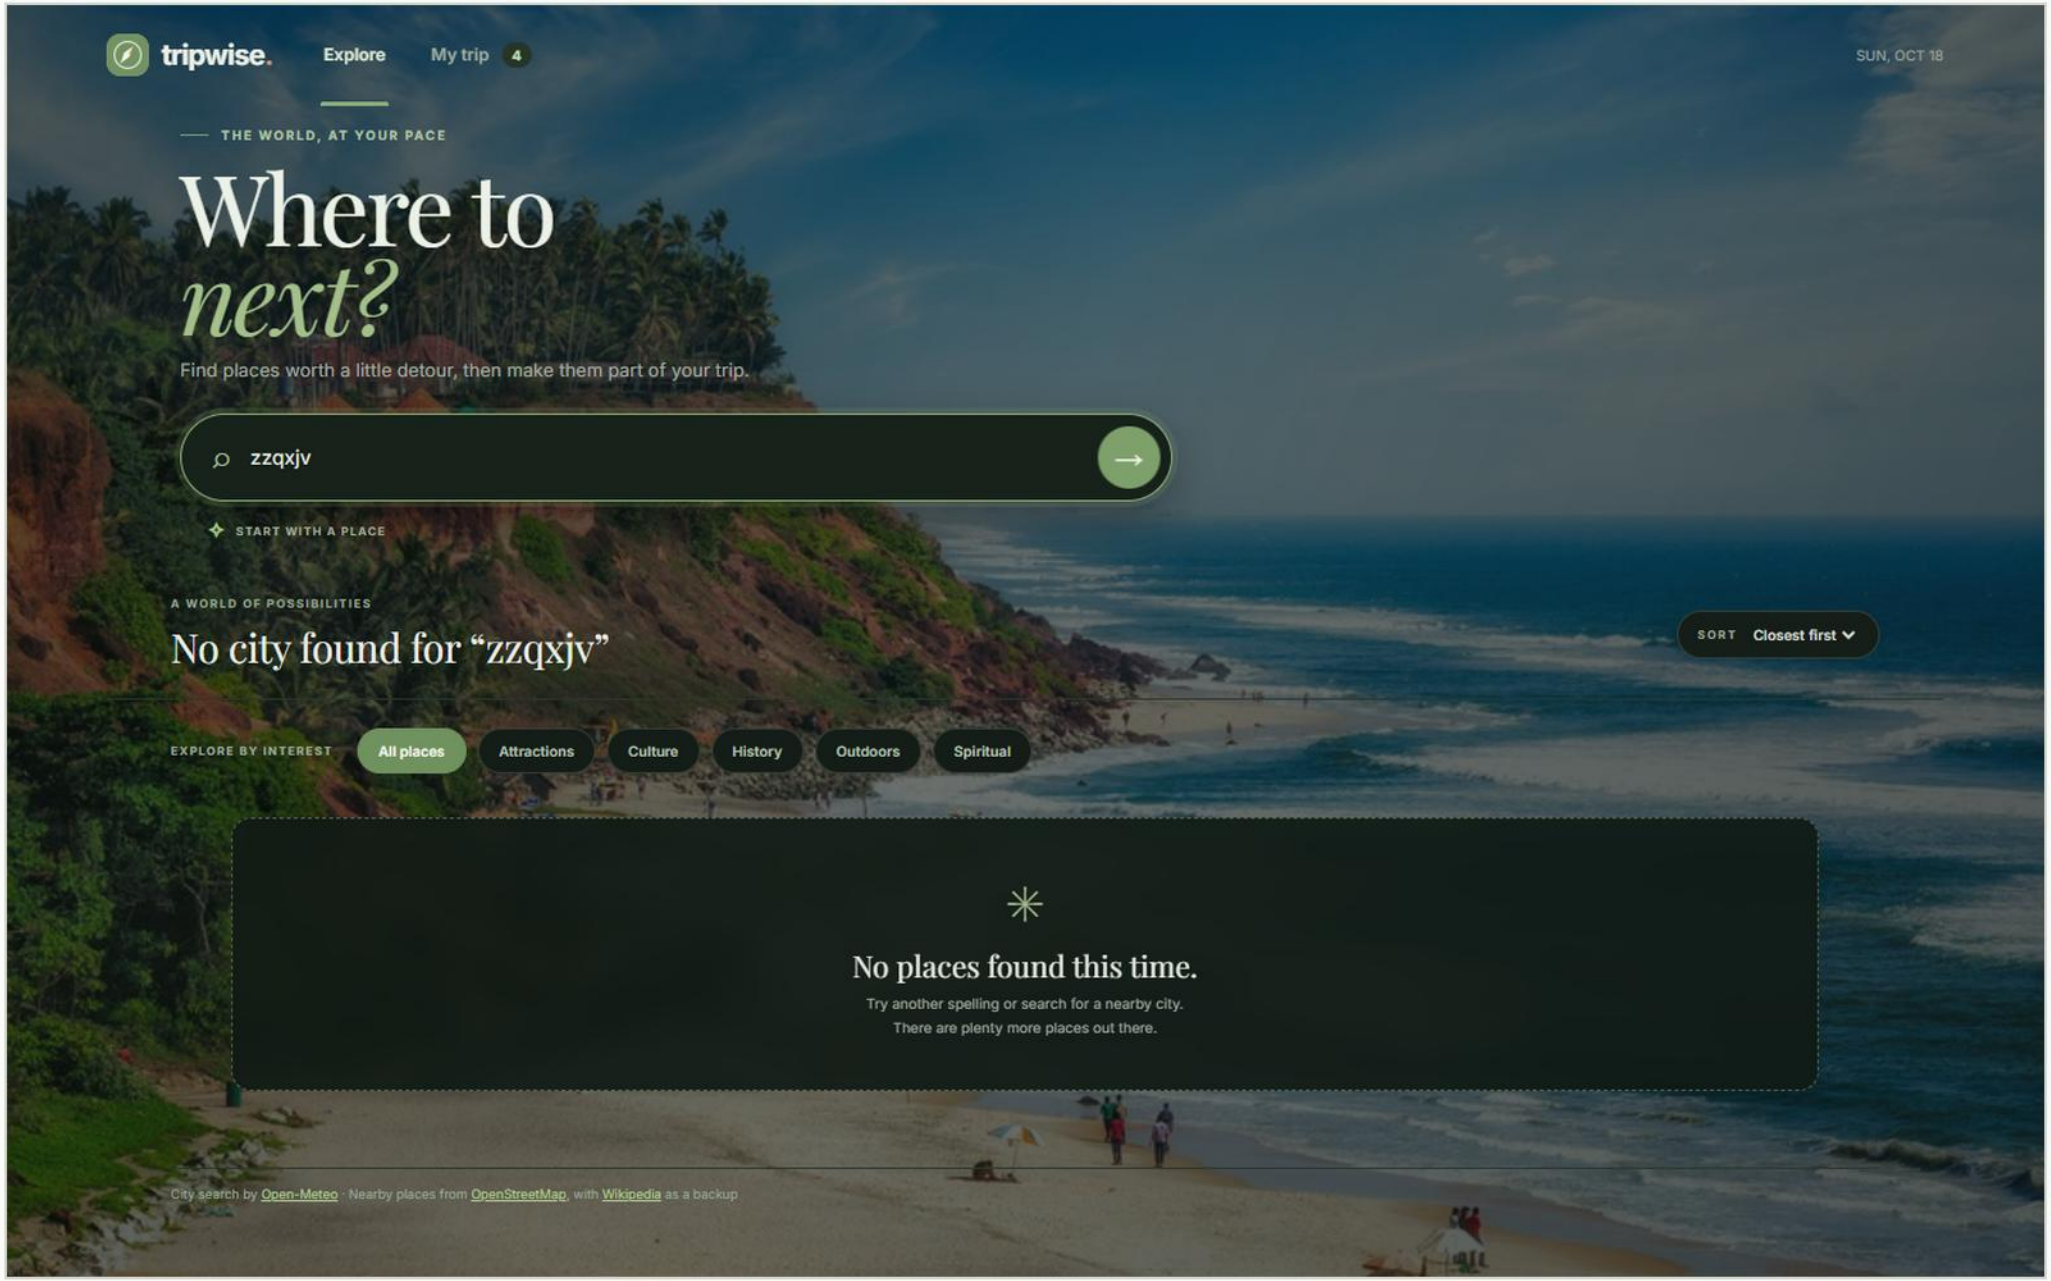

8. My trip — populated itinerary

Saved places persisted in the database per browser profile, with remove action.

9. Empty state — no results

Friendly message when a search matches no city.

10. Mobile views

Explore, results, destination details and My trip at 390 px width.
